

CRACKERS VS HACKERS

Hackers and Crackers are often confused, but they have distinct goals and methods. Understanding these differences is key to recognizing online threats and protecting yourself.

WHO ARE HACKERS?

Hackers are individuals who use their technical skills to explore, understand, and often improve systems. Types of Hackers are White Hat, Grey Hat, and Black Hat

WHO ARE CRACKERS?

Crackers are malicious hackers who crack software security to steal information, cause damage, or bypass security measures.

GOAL AND INTENTION

Hackers aim to improve security and innovate through technology. Crackers, however, seek to exploit systems for personal gain or cause harm.

METHODS AND TOOLS

Hackers use ethical tools to improve security, while crackers use illegal methods like malware to exploit systems.

IMPACT ON SOCIETY

Hackers help improve cybersecurity and protect systems, while crackers cause harm through data breaches and financial loss. Their actions have opposing impacts on society.
